# 环保不只是无醛

PP ecological decorative film uses food-grade PP as the base material and employs internationally advanced high-precision film production equipment. Through cutting-edge PP modification technology, the product achieves excellent adhesion. Currently, over 1,000 products across 9 major series have been developed, featuring exquisite and realistic surface textures. With diverse application scenarios, it meets various design requirements and serves as a perfect substitute for solid wood and other decorative materials.

## PP Ecological Decorative Film Performance Characteristics

|                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Softening point<br>140~150° C, steam<br>sterilizable, suitable<br>for high-temperature<br>lamination. | Formaldehyde, soluble heavy metals, EU REACH Substances of Very High Concern, EU RoHS 2.0, TSCA Toxic Substances Control Act, CP65 certification - California Proposition 65, PAHs Directive, EU Persistent Organic Pollutants (POPs), and other globally authoritative regulations on restricted toxic and hazardous substances were all tested as non-detectable. No unpleasant or irritating odor. Biodegradable, and when fully combusted, it only produces water and carbon dioxide, making it environmentally friendly. |
| Surface scratch<br>resistance performance                                                             | According to the national standard GB/T17657 requirements, the surface scratch resistance can reach 1.5N, with no marks left from fingernail scratches.                                                                                                                                                                                                                                                                                                                                                                       |
| Lightfastness color<br>fastness                                                                       | Excellent lightfastness, resistant to discoloration, can reach Blue Wool Scale grade 6.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Pollution resistance<br>and solvent resistance<br>performance                                         | Coffee, cola, shoe polish, red ink, tea, lipstick, nail polish, marker pens, etc. can be wiped clean without leaving stains; strong solvents such as alcohol, gasoline, and 30% hydrogen peroxide will not cause fading or deformation when scrubbed.                                                                                                                                                                                                                                                                         |
| Resistance to thermal<br>cycling                                                                      | High temperature 80° C for 2 hours, low temperature -20° C for 2 hours, cyclic testing for 4 cycles, with no surface cracks, discoloration, wrinkling, or other phenomena observed.                                                                                                                                                                                                                                                                                                                                           |
| Softening point 140~150° C, steam sterilizable, suitable for high-temperature lamination.             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
